ABSTRACT

This article provides information about the history of the origin of the Internet, views about it, Advantages and disadvantages, benefits and harms.

Keywords: Internet, benefits, blogs, web sites, E-mail, advantages and disadvantages.

АННОТАЦИЯ

В данной статье предоставлена информация об истории Интернета, его взглядах, преимуществах и недостатках, достоинствах и недостатках.

Ключевые слова: Интернет, преимущества, блоги, веб-сайты, электронная почта, преимущества и недостатки.

ANNOTATSIYA

Ushbu maqolada Internetning paydo bo'lish tarixi, u haqidagi qarashlar, afzalliklari va kamchiliklari, foydalari va zararlari haqida ma'lumotlar berilgan.

Kalit so'zlar: Internet, foydalar, bloglar, web-saytlar, pochta, afzallik va kamchiliklar.

The Internet (or internet) is the global system of interconnected computer networks that uses the Internet protocol suite (TCP/IP) to communicate between networks and devices. It is a network of networks that consists of private, public, academic, business, and government networks of local to global scope, linked by a broad array of electronic, wireless, and optical networking technologies. The Internet carries a vast range of information resources and services, such as the interlinked hypertext documents and applications of the World Wide Web (WWW), electronic mail, telephony, and file sharing. The Internet is a vast network that connects

computers all over the world. Through the Internet, people can share information and communicate from anywhere with an Internet connection.

The Internet, sometimes called simply “The Net,” is a worldwide system of computer networks -- a network of networks in which users at any one computer can, if they have permission, get information from any other computer (and sometimes talk directly to users at other computers). It was conceived by the Advanced Research Projects Agency (ARPA) of the U.S. government in 1969 and was first known as the ARPANET. The original aim was to create a network that would allow users of a research computer at one university to "talk to" research computers at other universities. A side benefit of ARPANet’s design was that, because messages could be routed or rerouted in more than one direction, the network could continue to function even if parts of it were destroyed in the event of a military attack or other disaster.

Internet provides a wide range of vision for all most all the sectors starting from educational or technical to political or social. it gives a opportunity to share your information to the world. Many people during the pandemis learned new skills, some started a new business, some worked on their old hobbies .. all with the help of internet. In connects us to the rest of the rest of the world. Indeed internet is one of the rest of the world. Indeed internet is one of the greatest creations of human being.

Advantages of internet:

Internet is a good medium for exchange of information. The Internet serves as both a tool and a medium. Communication, compilation and verification and confirmation of news has become easy. Internet has made the work of research and research very easy. The knowledge of the whole world is available at the push of a button. Provides easy and fast access to information on virtually any topic.

Enables communication with people all over the world through email, social media, and other messaging platforms.

Offers a platform for online commerce, allowing businesses to reach a wider audience and consumers to easily purchase goods and services.

Facilitates remote work, online learning, and telemedicine, making it possible for people to work, study, and receive medical care from anywhere. Offers a wide range of entertainment options, including streaming video, music, and games.

Disadvantages of the internet:

Internet is also a means of spreading obscenity, misinformation and filth. Internet is an expensive medium. The crime world is getting a boost. Children are moving away from nature. It is perverting the mind of the young generation. The youth have become crazy about the internet. The sanskars of the children are deteriorating. Money is being stolen from bank accounts. Transaction of black money has become easy. Terrorism is spreading from one corner of the world to the other through the internet.

Can be a source of misinformation and fake news, making it difficult to distinguish fact from fiction.

Can lead to addiction and excessive use, which can have negative impacts on mental health and social relationships.

Can expose users to cyberbullying, harassment, and other online threats.

Can facilitate illegal activities, such as piracy, hacking, and the sale of illicit goods and services.

Can compromise users' privacy and security, as personal information and data are often shared and stored online.

In general, if the Internet can be used for the right and convenient purpose, one can achieve great things with its power. The internet is a powerful tool that has transformed many aspects of our lives, such as communication, education, entertainment, and business. However, it also has some drawbacks that we need to be aware of and deal with. It depends on our will not to face them.
